nine years have passed since the second edition of the handbook of aseptic processing and packaging was published significant changes have taken place in several aseptic processing and packaging areas these include aseptic filling of plant based beverages for non refrigerated shelf stable formats for longer shelf life and sustainable packaging along with cost of environmental benefits to leverage savings on energy and carbon footprint in addition insight into safe processing of particulates using two and three dimensional thermal processing followed by prompt cooling is provided in the third edition the editors have compiled contemporary topics with information synthesized from internationally recognized authorities in their fields in addition to updated information 12 new chapters have been added in this latest release with content on design of the aseptic processing system and thermal processing thermal process equipment and technology for heating and cooling flow and residence time distribution rtd for homogeneous and heterogeneous fluids thermal process and optimization of aseptic processing containing solid particulates aseptic filling and packaging equipment for retail products and food service design of facility infrastructure and utilities cleaning and sanitization for aseptic processing and packaging operations microbiology of aseptically processed and packaged products risk based analyses and methodologies establishment of validated state for aseptic processing and packaging systems quality and food safety management systems for aseptic and extended shelf life esl manufacturing computational and numerical models and simulations for aseptic processing also there are seven new appendices on original patents examples of typical thermal process calculations and particulate

studies single particle and multiple type particles and food and drug administration fda filing the three editors and 22 contributors to this volume have more than 250 years of combined experience encompassing manufacturing innovation in processing and packaging and quality assurance and compliance their insight provides a comprehensive update on this rapidly developing leading edge technology for the food processing industry the future of aseptic processing and packaging of foods and beverages will be driven by customer facing convenience and taste use of current and new premium clean label natural ingredients use of multifactorial preservation or hurdle technology for maximizing product quality and sustainable packaging with claims and messaging

aseptic processing and packaging of food explains how aseptic processing and packaging first began and traces its fascinating progression over the last fifty years it explores current technologies discusses why they are used today and explains why certain basic approaches to critical operations such as pumping heat exchange fluid flow and controls must be applied commercially used heating and holding concepts are also explained with emphasis on avoiding problems this unique book states the technique and method of choice for accurate flow control timing it includes an explanation of secondary flow and describes its use to solve many of the heat exchange and fluid flow problems associated with particle containing products it also discusses the manufacturers of aseptic packaging equipment exploring the types of products they produce and the advantages and disadvantages of their product design aseptic processing and packaging of food fills in many of the information gaps left by other sources a must have reference for anyone working in this area

since publication of the first edition of this book aseptic processing and packaging of food significant changes have taken place in several aseptic processing and packaging areas these include changes in aseptic filling of nutritional beverages in plastic bottles the popularity of value added commodity products such as juice concentrate and

of particulates in foods recent years have seen significant advances which will almost certainly result in substitution of existing and conventional retorting in addition when combined with high temperature short time (HTST) processing we can expect substantial further growth reflecting quality and convenience advantages over products processed from yesterday's technologies the anticipated growth in particulates is driven by both materials and packaging advances and only requires modest marketing of the organoleptic advantages to establish their place on menu options the directions taken in packaging developments especially those interfacing with the latest and established methods of processing are increasingly influenced by the need to design packaging on a cradle to grave basis time was when multi laminated films on board satisfied the total needs of consumers of aseptic products the problems of recycling combustible i.e. energy generating materials laminated with aluminium foil are becoming sensitive issues in a world preoccupied with recycling and are creating openings for alternative and environmentally friendly material combinations this book brings together advanced technologies in the field to provide information for professionals with interests in aseptic processing on how to go about selecting a system appropriate to their commercial needs and constraints

in aseptic processing food is stored at ambient temperatures in sterilized containers free of spoilage organisms and pathogens the results of this food technology come in all shapes and sizes from the consumer packages of milk on the shelves of the supermarket to the huge containers full of orange juice transported around the world by cargo ships over the last couple of decades aseptic bulk storage and distribution has revolutionized the global food trade for example more than 90 percent of the approximately 24 million tons of fresh tomatoes harvested globally each year are aseptically processed and packaged for year round remanufacture into various food products the technology has also been applied to bring potable water and emergency food aid to survivors of the 2004 tsunami in southeast asia and the victims of hurricane katrina in 2005 as well as to other crisis situations worldwide the construction of new aseptic facilities continues around the world and an up to date understanding of the technology is essential for a new generation of food scientists and engineers alike the contributors to this important textbook discuss all aspects of aseptic
